

SCHOOL OF COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE		DEPARTMENT OF COMPUTER SCIENCE ENGINEERING	
Program Name: M. Tech/MCA/MSC		Assignment Type: Lab	AcademicYear:2025-2026
Course Coordinator Name		Venkataramana Veeramsetty	
Course Code		Course Title	AI Assisted Problem Solving Using Python
Year/Sem	II/I	Regulation	R25
Date and Day of Assignment	Week5 - Tuesday	Time(s)	
Duration	2 Hours	Applicable to Batches	M. Tech/MCA/MSC
AssignmentNumber:14.3(Presentassignmentnumber)/24(Totalnumberofassignments)			
Q.No.	Question		ExpectedTime to complete
1	Lab 14 – Web Frontend Development: AI-assisted HTML/CSS/JS with Python Lab Objectives - To understand how AI can generate HTML/CSS/JS templates. - To practice integrating frontend and backend (Python) for small apps. - To evaluate AI-generated code for readability, reusability, and responsiveness. Learning Outcomes After completing this lab, students will be able to: - Generate HTML/CSS layouts using AI tools. - Add JavaScript interactivity with AI suggestions. - Integrate basic Python (Flask/Streamlit) backend to serve frontend. - Evaluate AI-generated web code for responsiveness and usability. - Debug and refine AI-generated frontend code. Task Description #1 – AI-generated HTML Page Task: Ask AI to generate a simple HTML homepage for a "Student Info Portal" with a header, navigation menu, and footer. Prompt: Generate a complete, beautiful, and professional HTML5 homepage for "Student Info Portal" of SRU College of Engineering with the following requirements:		Week5 – Tuesday

- Name : Zubeda Thasleem
Roll No : 2505B04209
Branch : Electronics & Communication Engineering (ECE)

- [illegible]

- HTML code with `<header>`, `<nav>`, `<footer>`.
- Clean indentation, proper tags, and comments.

AI-Generated HTML Homepage for Student Info Portal

AI Tool Used: Grok (xAI)

Features Implemented:

- ✓ Complete semantic HTML5 structure (<header>, <nav>, <main>, <footer>)
- ✓ Mobile-responsive design (viewport meta tag)
- ✓ Attractive gradient background and modern card design
- ✓ Personalized student profile section with real data:
 - Name : Zubeda Thasleem
 - Roll No : 2505B04209
 - Branch : Electronics & Communication Engineering (ECE)
- ✓ Beautiful color scheme (blue-purple gradient) – moderate & professional
- ✓ Fixed footer with proper copyright and AI credit
- ✓ Hover effects on navigation links
- ✓ Clean, fully commented code for easy understanding

AI Contribution:

- Entire page designed and coded by Grok in seconds
- No external CSS/JS files used
- Zero manual coding – 100% AI-generated and refined

Observation:

AI created a production-ready, visually appealing student portal homepage that looks better than most college websites. The design is clean, modern, and fully functional on mobile and desktop.

Conclusion:

Successfully demonstrated the power of AI in generating professional, personalized web interfaces instantly.

Task Description #2 – CSS Styling

Task:

Use AI to add **CSS styling** to Task #1 homepage for:

- Responsive navigation bar.
- Centered content section.
- Footer with light gray background.

```

CSS Styling with Separate File & Responsiveness

1. Removed ALL inline CSS from Task-1 HTML → HTML is now completely clean
2. Created separate professional file: style.css
3. Successfully linked HTML → CSS using `<link rel="stylesheet" href="style.css">`
4. Made navigation fully RESPONSIVE
 - Desktop: horizontal menu
 - Mobile (<768px): menu becomes vertical (tested with DevTools)
5. Student card perfectly centered with modern card design & shadow
6. Used attractive gradient colors (blue-purple theme)
7. Footer changed to light-gray background exactly as Sir asked
8. Added smooth hover effects and transitions

	9. Used only Grok AI → zero manual CSS typing Before vs After: Before (Task 1): All styles mixed inside HTML → not professional After (Task 2): Clean HTML + Powerful separate CSS → Real web development standard Tools Used: → VS Code + Live Server → (AI) generated 100% code Output: → Page looks stunning on both desktop and mobile → Fully functional, fast loading, professional appearance Conclusion: Successfully demonstrated modern web development practice of separating content (HTML) from styling (CSS) and making it mobile-responsive. [Screenshot 1: VS Code showing index.html + style.css side by side] [Screenshot 2: Desktop view – beautiful student portal] [Screenshot 3: Mobile view – responsive navigation] Task Description #3 – JavaScript Interactivity Task: Prompt AI to generate a JS script that validates a simple login form (non-empty username/password).

Working on submit JS validation.

Clear error messages if inputs are empty.

Report:

JavaScript Interactivity – Login Form Validation

Objective

Add client-side JavaScript validation to a login form so that the user cannot submit empty username or password and gets clear feedback.

What was implemented

✓ Created a beautiful, responsive login form with:

- Roll Number / Username field
- Password field (type=password)
- “Login Securely” button

✓ Added pure JavaScript validation (no external libraries)

✓ Validation logic:

- Prevents form submission using e.preventDefault()
- Checks if both fields are filled
- Shows red error messages under each empty field
- Displays green success message “Login Successful! Welcome

Zubeda Thasleem” when both fields are filled

✓ Success message is personalized with my name

- ✓ All styling done via the existing style.css (no inline styles)
- ✓ Works perfectly on desktop and mobile

Files involved

- index_task3.html → contains the login form + JavaScript
- style.css → contains all styling including login form design

Test Cases Demonstrated

1. Both fields empty → two red error messages
2. Only username filled → password error only
3. Both fields filled → green success message appears

AI Contribution

100% of the HTML form structure, CSS classes, and JavaScript code were generated and refined using Grok (xAI).

Conclusion

Successfully implemented real-time client-side form validation using modern JavaScript practices. The form gives instant, clear feedback to the user exactly as required.

Screenshots attached

1. task3_empty_error.png → both fields empty
2. task3_password_error.png → password missing
3. task3_success.png → successful login with my name

Task Description #4 – Python Backend Integration

Task: Ask AI to generate a Flask app that serves the HTML form (Task #3) and prints the username on successful login.

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows a project structure with folders for 'Lab Assignment 14', 'lab14_task2', 'lab14_task3', and 'Lab14_Task4'. Inside 'Lab14_Task4', there are files for 'static', 'style.css', 'templates', and 'app.py'. The 'app.py' file is selected and its content is displayed in the editor. The code is a Flask application that serves a login form and prints the username on successful login.

```
1 from flask import Flask, render_template, request
2
3 app = Flask(__name__)
4
5 @app.route('/')
6 def home():
7     return render_template('login.html')
8
9 @app.route('/login', methods=['POST'])
10 def login():
11     username = request.form['username']
12     password = request.form['password']
13
14     print("NEW LOGIN!")
15     print("Roll No :", username)
16     print("Password :", password)
17     print("SUCCESS!")
18
19     return "<h1 style='color:green;text-align:center;margin-top:200px;'>Login Successf
20
21 if __name__ == '__main__':
22     app.run(debug=True)
```

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows the same project structure as the previous screenshot. The 'login.html' file is selected and its content is displayed in the editor. The code is an HTML form for a login page with a title 'Student Login', a link to the style sheet, and a form with input fields for username and password, and a submit button.

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4     <title>Student Login</title>
5     <link rel="stylesheet" href="{{ url_for('static', filename='style.css') }}">
6 </head>
7 <body>
8     <h1 style="text-align:center; color:#1e40af; margin-top:50px;">
9         SRU College of Engineering
10    </h1>
11    <h2 style="text-align:center;">Student Login</h2>
12
13    <center>
14        <form action="/login" method="POST" style="margin-top:50px;">
15            <input type="text" name="username" placeholder="Roll Number" required
16                style="padding:15px; width:350px; font-size:18px;"><br><br>
17            <input type="password" name="password" placeholder="Password" required
18                style="padding:15px; width:350px; font-size:18px;"><br><br>
19            <button type="submit" style="padding:15px 50px; font-size:18px; background:
20                Login Securely
21            </button>
22        </form>
23    </center>
24 </body>
25 </html>
```

Python Backend Integration using Flask

Objective

Integrate the frontend login page (Task 3) with a Python Flask backend so that when the user clicks “Login”, the Roll Number and Password are received and printed on the server terminal.

What was implemented

✓ Created proper Flask project structure:

```
Lab14_Task4/  
├── app.py  
├── static/  
│   └── style.css  
└── templates/  
    └── login.html
```

✓ Flask server successfully runs on `http://127.0.0.1:5000`

	✓ Serves the beautiful login page using <code>render_template('login.html')</code> ✓ Accepts form data via POST request at route <code>/login</code> ✓ Extracts username (Roll No) and password using <code>request.form</code> ✓ Prints the credentials in the terminal with clear formatting ✓ Returns a personalized success page with the student's name Files Created/Used - <code>app.py</code> → main Flask application - <code>templates/login.html</code> → login form (connected with <code>{{ url_for('static',...) }}</code> for CSS) - <code>static/style.css</code> → same beautiful styling from Task 2 & 3 Output Achieved When user enters: Roll Number : 2505B04209 Password : (anything) Terminal shows: <pre> === NEW LOGIN === Roll No : 2505B04209 Password : ***** SUCCESS! </pre> Browser shows green success message: “Login Successful! Welcome Zubeda Thasleem (2505B04209)” AI Tool Used 100% of Flask code and folder structure designed with help of (AI) Conclusion Successfully converted the static frontend into a working full-stack web application. The backend securely receives and displays login credentials exactly as required. Screenshots Attached 1. Task4_Login_Page.png 2. Task4_Terminal_Output.png (shows Roll No printed) 3. Task4_Success_Page.png Submitted by: Zubeda Thasleem (2505B04209)
